

Connect Procore and Newforma

SAVE TIME, MONEY, EFFORT AND
RISK BY INTEGRATING SUBMITTAL
AND RFI WORKFLOWS

Newforma's Workflow Connector for Procore streamlines and simplifies construction contract administration by allowing the construction team and the design team to each work in their preferred software solution. Once granted access to the Procore project, it can be linked to a Newforma project by an administrator. Once linked a Submittal or RFI distributed for review from Procore will automatically appear within Newforma. After the review process is completed the reviewed Submittal or RFI will automatically be returned to Procore. The Connector completely eliminates double data entry or the need to manually transfer files from one system to another.

WITH THE NEWFORMA WORKFLOW CONNECTOR YOU CAN:

- Transfer submittals and RFIs to the architect's Project Center platform
- Transfer reviewed submittals and RFIs back to Procore
- Eliminate double entry for both the architect and contractor

REQUIREMENTS

Lead Designer must be using Newforma Project Center v12.2 or later with Newforma Link
