Planning & Urban Design	

“Newforma software provides considerable advantages on complex, large-scale projects and their numerous potential risk issues.”

King Abdullah University of Science and Technology (KAUST); Thuwal, Saudi Arabia

Challenges?

- The King Abdullah University of Science and Technology project team numbered 750 architects, engineers and consultants across 12 time zones.
- As with other complex, global projects, team members were challenged to manage milestones, coordinate information and mitigate risk.

Results?

- Team members can quickly search emails, details, specifications, requests for information, CAD drawings and more to resolve issues and avoid risk.
- Newforma Info Exchange simplifies coordination of the consultant's models, drawings and documents.
- The integrated Newforma Markup function saves time and slashes printing costs.
