

# How to Eliminate AEC Project Risk

*“One of the biggest risks to a firm is missing information. Newforma allows you to manage all your project information and software systems together more effectively with less time wasted and less risk.”*

*—Judith Kelemen, Senior Architect at FARRELLS*

Farrells uses Newforma software to mitigate risk by enabling the firm to work more efficiently and collaboratively. *“One of the biggest risks to a firm is missing information,”* Judith Kelemen, Senior Architect at Farrells, said. *“It might be an email with only a bit of information, but it’s a huge risk.”*

WHY NEWFORMA PROJECT CENTER

Maintain an Audit Trail

*“Newforma Project Center allows us to share and track information so that everyone can see what was sent out and who downloaded the information. It puts the accountability on the recipient. If someone asks why there was a hold-up, we can say, ‘Well, we sent this at this time and this date.’”*

Streamline Project Workflows

*“We are on projects from start to finish, from planning to delivery. Newforma software can be used in all these stages completely and differently. We can track each stage – planning, construction, and by using a project email, we can keep all correspondence as it relates to a project.”*

Search Project Information

The search option within Newforma Project Center is an important feature for the team at Farrells. *“We found emails from archived projects more than 8 years ago because we could search through Newforma’s indexing tool.”*

Save Time and Minimize Risk

*“Newforma Project Center allows you to manage all your project information and software systems together more effectively with less time wasted and less risk. That’s the main reason we started using Newforma software. We wanted to work more efficiently and to take those processes and results to our external clients.”*

# FARRELLS

Farrells are internationally recognized architects and urban designers. The practice has designed award-winning buildings and masterplans throughout the world for over half a century. They have designed the tallest building in the world by a British Architect, the UK’s first eco town in Bicester, two of the largest high-speed rail stations in the world and an airport, which has twice been voted the world’s best.
