Q. What is the difference between Newforma Project Center and ConstructEx?

A. See below chart:

CATEGORY		
KEY FUNCTIONALITY	Submittals RFI's Quality Control Document Change Management Shared Folders Project Team Management	Email Filing and Management Document Control File Management File Viewing and Markup Action Items Shared Folders Calendar Meeting Minutes Project and Company Team Management Contract Administration <ul style="list-style-type: none"> <li>• Submittals</li> <li>• RFI's</li> <li>• Punch List</li> <li>• Document Change Management</li> <li>• Daily Reports / Site Visits</li> </ul>
KEY INTEGRATIONS	None. See integration question below.	MS Outlook / Office 365 Microsoft File System Autodesk Revit and Navisworks Deltek Vision Panzura / Nasumi On Prem EDMS (ProjectWise, SharePoint, FileNet) Bluebeam Clearview Avitru BST

Q. Do Project Center and ConstructEx connect? We work with NPC customers, will ConstructEx communicate with their system?

A. They do not connect. Although there are overlaps between the products surface level functionality, they are fundamentally two different solutions oriented towards different user types (NPC – Design team; ConstructEx – Construction) and with different objectives.

*Note:* Some of the confusion resulted from a rebranding effort to make all Newforma solutions look similar.

Q. How does training work? Is training included?

A. Courses are designed for everyone on your project team – from new users to global administrators. Your firm will see immediate results in productivity and increased organization

of project information with ConstructEx after the very first training session.

A single project contract includes one (90 minute) Administrative Training session and one (90 minute) User Training session. A multi-project contract can include additional sessions, based on the total cost of the contract. Additional training is available for purchase.

Q. What systems does Newforma ConstructEx Integrate with?

A. ConstructEx does not currently integrate with any other solution. ConstructEx is laser focused on managing RFI / Submittals and assuring the team has access to the most current project documents. With these goals in mind, ConstructEx has not been extended to other focuses via integrations.

Q. Once Newforma ConstructEx is set up, can I control permissions?

A. Permissions can be defined for a variety of ConstructEx modules to limit access. These include:

- Limit access to “Construction Phase Documents” by their type
- Limit the roles permitted to issue “Field Reports”
- Limit the roles permitted to access the “Message Forum”
- Limit the view, upload and move/rename/delete functions to “Shared Folders”
- For RFI’s and Submittals, reviewer comments and attachments can be hidden

Q. What happens at the end of my project, how do I get my documents?

A. Newforma’s Support and Service Team can archive completed ConstructEx projects for customers. Archiving removes the project from the active projects list but maintains the project structure and data so users can reference it if needed. The archive is in an HTML format, and collection of project documents, that is navigated by using any browser (it is not necessary to be online). The navigation is like the online experience when the project was active. However, content can no longer be added.

Q. Is there a limit for storage, or fees if I go over a certain amount?

A. There are no limits to the storage or additional storage related fees.

Q. Is there a mobile version? How can I connect from the field?

A. There are four apps available to enhance the ConstructEx user experience

1. The Capture App, available for iPhone and iPad, is used to capture quality control items.
2. The Tasks App, for iPhone and iPad, allows you to manage your quality control items in the field.
3. The Plans App, for the iPad, is used in the field to view and markup project plans and locate quality control items.
4. The Project Teams App, for iOS or Android smartphones or tablets, is used to access contact information for your project team members.

Although not an optimized user experience, ConstructEx can be viewed using a browser on a smart phone or tablet.
