PROJECT TYPES

Aviation & Transportation	Residential
Commercial	Special Structures
Cultural & Institutional	Sports & Public Assembly
Education	
Government	
Healthcare	
Hospitality & Gaming	
Mission Critical	

“Newforma software is a holistic tool that ties the field to the office, which is essential for forensic investigations.”

Earthquake damage assessment, Christchurch, New Zealand

Challenges?

- It's too labor-intensive to manage and package all the email and field data required for forensic investigations of building and infrastructure catastrophes.

Results?

- Reports go out faster.
- More focused and efficient investigations lead to faster repairs.
- It's easy to gather and share field data and email pertinent to litigations.
