

DOCUMENT MANAGEMENT MADE SIMPLE

Most AECO professionals use incompatible systems to address project document management needs even though using mismatched systems results in increased administrative overhead, inefficiency, and opportunity for error. It's time to put your project documents in a centralized system for instant access to the most current information.

Access Current Drawings and Specifications

The Sheet Index Module gives you quick access to the current set of drawing sheets for the entire project team and allows you to download current sheets with a couple simple clicks.

Eliminate Manual Entry of Construction Documents

The Construction Phase Documents Module eliminates the use of manual spreadsheets to manage documents throughout the project lifecycle ASIs, COs, Bulletins, Sketches, and more.

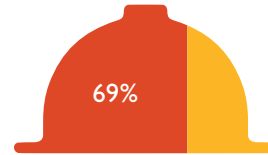

Create Customized Folders and Subfolders

The Shared Folders Module acts like an FTP site for all non-PDF project documents. It allows you to create folders and subfolders for data-like directory spreadsheets and Revit/AutoCAD files.

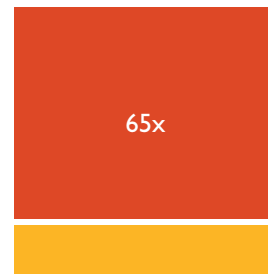

Manage the Bidding Process

The Design Bid Packages Modules enables you to create, issue, and revise design/bid packages from before the project starts through to its completion.

Sixty-nine percent of projects go 10 percent or more over budget.
