

# Procore Newforma

SAVE TIME, MONEY, EFFORT AND  
REDUCE RISK BY INTEGRATING  
SUBMITTAL AND RFI WORKFLOWS

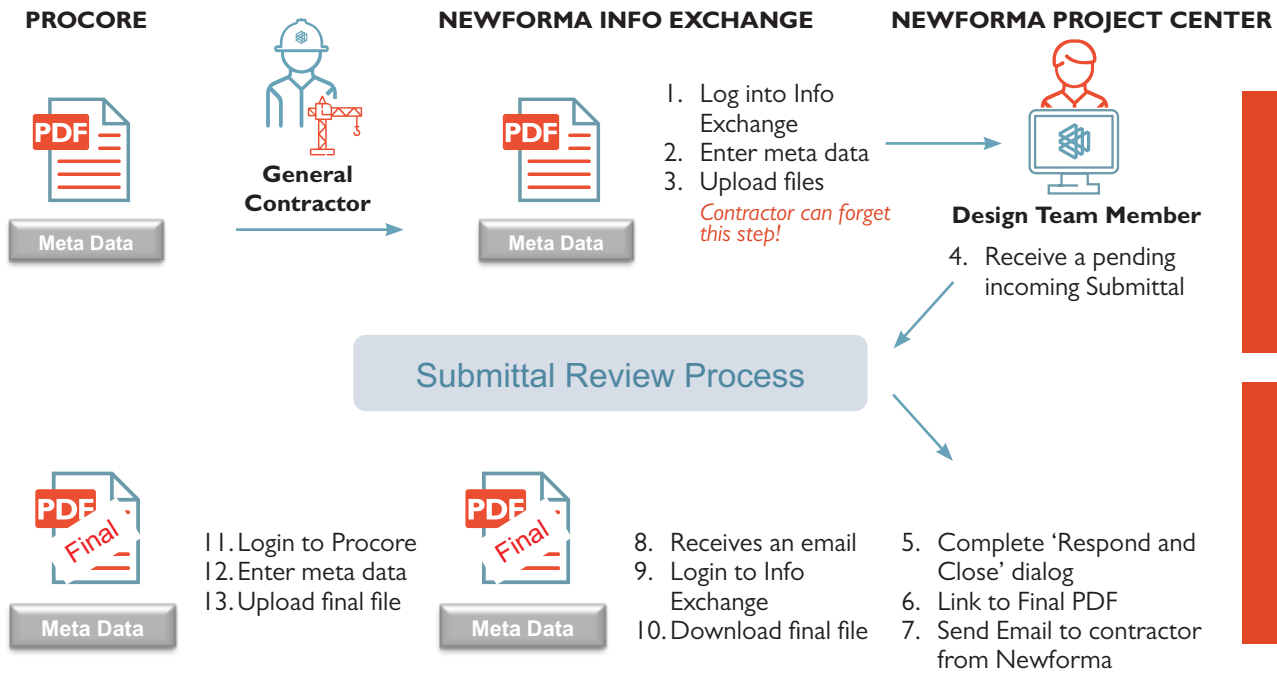

Newforma's Workflow Connector for Procore streamlines and simplifies construction contract administration by allowing the construction team and the design team to each work in their preferred software solution.

## WHY CONTRACTORS LOVE THIS CONNECTOR

Contractors using Procore face unique challenges when working with design teams that used third-party programs such as Newforma Project Center. With this connector, contractors and design teams work within the system they prefer and experience more streamlined and simplified workflows by automating the transfer of RFI and submittal information.

- No need to learn a new system or teach design team members how to use Procore.
- Use the product they know and love to track project workflow data.
- Maintain consistent and accurate records for construction meetings between project team members.
- Receive RFIs and submittals back when the review process is complete without having to contact design teams to respond to Procore.
- Streamline workflows for individuals that choose not to use Procore, no more manual work!
