

NEWFORMA CLOUD

Newforma Cloud is a new web and mobile user experience offering a more streamlined and modern user experience that provides access to Newforma Project Center project information on the go. Features and improvements automatically update through continuous delivery, reducing the client update time and cost required by traditional approaches.

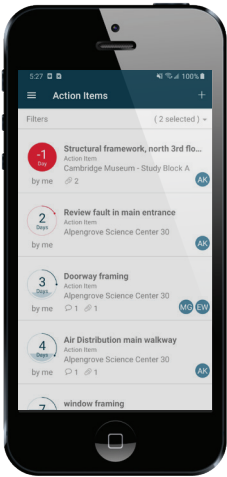

SINGLE SIGN-ON

Single Sign-On

Everything needs a password today. Newforma Cloud simplifies authentication by supporting single sign-on through Microsoft Azure Active Directory, allowing users to use their domain password. There is no need to remember another password and ensures that existing IT security policies are respected.

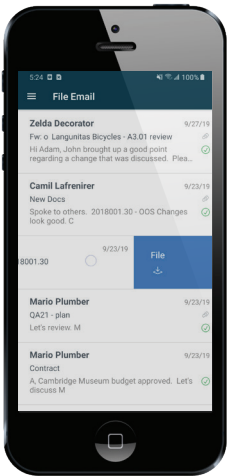

ACTION ITEMS

Project File Access

Information moves quickly, and users are on the go and need to act in real-time. Many solutions require users to synch information, have data size limitations for uploading and downloading files, don't provide a full audit trail for external team member access, and don't keep all project file access within one single solution. Newforma Cloud has removed these barriers and adds features to help promote and improve the use of real-time collaboration!

- Instant access to all project files for internal team members
- Easily share a folder to a group/individuals from the project team
- Share a folder to an individual(s) not on the project team
- No file size limitation for uploading and downloading
- Add a note to include context before a notification is sent
- Distinct permission levels to grant users – Select user permission level for collaborating
- Record of activities and share information at the folder level for all users
- Record of all event information at the project level

With Newforma Cloud, users can search for any file on the project just like Project Center, allowing team members to get the information they need to get on with the task at hand.

FILE EMAIL

Action Items

People can overestimate how well they are likely to remember things. Follow up actions often arise from meetings, while in the field or reading emails. Users can view their assigned Action Items, or Action Items they have assigned across all their "My Projects" for quick status review or update to open actions. Action Items can be created quickly, assigned to project team members, and attach files (i.e., documents, photos or videos) to complement the information and record discussion items for real-time collaboration – all in an easy to use, streamlined user experience.

File Email

Accessing information when it is needed to make a decision is crucial on projects. Users need to file emails into their respective projects to ensure that all users can access the hive of information when a decision needs to be made. Filing emails can be time-consuming, but with Newforma Cloud Mobile, filing an email is as easy as a swipe of a finger!

“Our younger staff are really into the Newforma Cloud app because it’s a one stop shop, instead of jumping between multiple apps.” –AKF
